A PROCESS CMDB

Organizations have a unique challenge to see their business vision, mission – objectives – mapped to the business processes they run and applications that support those business process. Imagine a single repository tool that provides a way to capture all this information and allowing it to be used for visualizing your business in 4 Dimensions.

BizCMDB brings the capability for businesses to piece this puzzle together in one single view. Visualize your enterprise as a executive, senior management or supervisor levels. Get quick insights into processes running, how they operate and what applications support those operations.

BizCMDB is developed by industry veterans with over 50 years of combined experience in repository based product provisioning.

Technology at work for you

HELPING YOU KNOW YOUR BUSINESS

BizCMDB is a product to help organizations create a central repository of their business, process and systems inventory.

Simplistic design, intuitive interfaces and centralized repository design helps accumulating major meta-data. BizCMDB acts as a liason that translates your business objectives into the processes executed to conduct them and applications (jobs) that support to run it.

BizCMDB extends the popular ITIL concept of CMDB and brings it to leadership in the organization. It allows importing critical meta-data documents into the system, or enter those in, with connections made between each "layer" of information to service the assessment needs. BizCMDB can provide a single source of "truth" when it comes to your business, allowing both managers and execution level staff to safely perform analysis and investigate what-f scenarios to grow.

flexible platform for your business needs
